

1. General description

Planar passivated very sensitive gate four quadrant triac in a SOT78 (TO-220AB) plastic package intended for use in general purpose bidirectional switching and phase control applications, where high sensitivity is required in all four quadrants. This very sensitive gate "series D" triac is intended to be interfaced directly to microcontrollers, logic integrated circuits and other low power gate trigger circuits.

2. Features and benefits

- High blocking voltage capability
- Direct triggering from low power drivers and logic ICs
- Planar passivated for voltage ruggedness and reliability
- Triggering in all four quadrants
- Low holding current for low current loads and lowest EMI at commutation
- Very sensitive gate

3. Applications

- General purpose motor control
- General purpose switching
